How RLT Builds Agents

Our method, following Charafeddine Mouzouni (Augment, "Build Your AI Sales Employee", Nov 5 2026) · RLT Systems LLC

The short version

> An agent is just Claude plus a folder of plain-text notes about how we work. Think of it like a new hire: give them a binder about the company, step-by-step instructions, and a checklist of what "good" looks like. Let them do the job while you watch. Correct them and they update the binder. Once they keep getting it right, put them on a schedule.

What an agent is (2026)

- **Brain + harness:** Claude is the brain. The Claude app (the Code part) is the "harness" that gives it hands: it can read files, search, and use our connectors (QuickBooks, Gmail, Drive).
- **No more building workflows in Zapier/N8N.** *"Building an agent literally boils down to a folder with text."* The work is writing down the context.
- **One shared folder runs every agent.** Each agent is a separate Claude conversation connected to the same folder, so they all know the same things. No extra wiring between agents.

The folder (our "business brain")

Part	What goes in it	RLT example
Owner	Who we are, what we believe, how we write	Bobby & Jessica's profiles; tone for customer emails
Business	Services, customers, areas, rates	Electrical work on Maui; $150 / $300 / $95 rates; 22% markup; GET 4.712%
Cockpit	Where things live and what's in progress	Billing Desk, job log sheet, QuickBooks company
SOPs	Step-by-step instructions for each job, including "ask me first" steps	Draft invoice from job log; match receipts; price stock items
Proof	Wins and references the agents can use	Past jobs, photos, reviews
Tests	What "good enough" means, as a checklist	QC rebuilds each invoice to the cent; no Notes to Bookkeeper; stock at the Home Depot price

AGENTS.md / CLAUDE.md	The first page every agent reads: where the SOPs are and the hard rules	CLAUDE.md in our repo

How to build each agent (his steps)

1. **Pick the right job.** It repeats weekly or monthly, has a clear "done", uses info we already have, has exceptions we can name, and saves at least an hour a month. Start with what you do every day.
2. **Write the SOP.** *"If you're not able to write down your process, you're not able to get the quality."*
3. **Write the tests.** Define good enough: *"A, B, C, D... add them to the tests."*
4. **Run it once by hand and watch.** *"Prove the processes before you automate them."*
5. **Run the tests.** The agent checks its own work against the tests and suggests fixes (e.g. "7 of 8 passed, add this rule").
6. **Give feedback, and have the agent update the SOP.** Every correction becomes a rule, so each run is better than the last. When a test misses a mistake, add a test.
7. **Keep your mind in the loop for important steps.** SOPs say *"ask me first on this step before you move forward." "I cannot run my business on vibes."* Agents create drafts. A person sends.
8. **Schedule it.** Once it's proven, schedule it (e.g. every Monday 7am). It sends a notice saying either the tests passed or something needs fixing. You look quickly, then say "go".

How you talk to an agent

- Open its conversation in the Claude app and type to it like an employee: "Build this week's invoices." "That's wrong: stock is billed at the Home Depot price. Update your SOP."
- Quick notes can go in the "Teach this agent" box on the Billing Desk. The Chief of Staff turns them into rules for Jessica to approve.
- Each morning, read the Chief of Staff briefing first. The other agents stay quiet unless something is wrong.

Warnings

- Don't schedule a job and step away before it's proven.
- Don't chase perfect or fancy. Define done and build what's essential.
- *"It is no magic."* An agent is only as good as the context we write down.
- *"If you can trust nothing and you need to read everything, there is no return on investment."* Earn trust with tests.

RLT's own rules on top

- Agents never send, void, delete, or create payment links. Bobby sends invoices himself.
- Trust ladder: read only → all drafts checked → spot-checked → can send. Moving up takes 20 clean runs plus Jessica's OK.
- Never read the “Notes to Bookkeeper” column. Email cleanup is archive-only.
